15 years accident free

15 years accident-free - what a great success at our refinery base in Wesseling, where thyssenkrupp Uhde Engineering Services manufactures and repairs appliances and heat exchangers.

The refinery base consists of several parts which have to be shut down for inspection every five years. As a result, one part of the system is shut down at least once a year, and we need between 10 and 40 people in addition to the approximately 15 employees already on site - which makes it even more difficult to ensure security during inspection.

“Such a result is only possible if the entire team pulls together to continuously create a safe working environment. We want to be a reliable partner to our customers in the future too.”

Fred Hanschmann, Head of Occupational Health & Safety, thyssenkrupp Uhde Engineering Services.

As a symbol of gratitude for the jointly achieved goal, the entire team was presented with a sculpture with the correspondingly engraved data as part of a small ceremony.
